

**Brief Description:**

The user runs the program to solve the Sudoku puzzles and see all possible solutions.

Flow:

1. User runs the program.
2. Program reads the puzzle files.
3. Program displays the original puzzle.
4. Program finds all possible solutions using backtracking.
5. Program prints the solutions and the number of solutions found.
6. If there is no solution, it prints "No solution found."

Detailed Description:

The program reads puzzle1.txt through puzzle5.txt and solves each Sudoku puzzle using recursive backtracking. It displays the original puzzle, all solutions found, and the total number of solutions.
